       FW: Remote Terminal (1)

John,
The policy is as follows:

If a CLEC/DLEC orders a 2W Digital ISDN loop, and the facility is currently
provisioned on Integrated DLC, BA will attempt to swap the facility to copper or
UDLC. If copper or UDLC is not available, the CLEC/DLEC, under terms and
special construction rates negotiated in their contracts can request that BA
build out. The CLEC/DLEC can not request what type of facility BA builds; most
often UDLC will be provisioned on these build outs.
If a CLEC/DLEC orders an ADSL or HDSL loop and the facility is currently
provisioned on Integrated DLC, BA will attempt to swap the facility to copper.
If copper is not available, the DSL loop request is denied. Construction is not
an option for obvious reasons. Again, most of these buildouts are UDLC and as
we all know, ADSL/HDSL will not work over DLC.

Hope this helps.
Rose

Before I respond I thought I should touch base with you.

What my response would be is "If we have intergrated DLC we will not do ISDN or IDSL.."
